

Nadine Saad

Staff Software Engineer, Distributed Systems

nadine.saad@example.com | +961 3 771 902 | linkedin.com/in/nadinesaad

SUMMARY

Eleven years on the JVM, the last five as a staff engineer owning the storage and consistency layer of a multi-tenant SaaS platform. I am the person the team sends the concurrency bug to.

EXPERIENCE

Staff Software Engineer, Anchorpoint Cloud - Remote

02/2020 - Present

- Technical owner of the metadata service: Java 21, Spring Boot, PostgreSQL, 14,000 requests per second at peak across three regions.
- Designed the multi-tenant sharding scheme and the online resharding process that moves a tenant between shards with no write downtime.
- Eliminated a phantom-read class of bug by moving four hot paths to SERIALIZABLE with explicit retry, after demonstrating the failure with a Jepsen-style test harness I wrote.
- Own the Kafka topology: 31 topics, exactly-once semantics on the billing path via the transactional outbox pattern.
- Reduced steady-state heap 35 percent and eliminated a 4-second full GC pause by switching to ZGC and fixing two unbounded caches found with JFR.
- Write the design documents that go to the architecture review, and I chair that review every other week.
- Mentor four engineers formally and run the internal Spring Boot training.

Senior Software Engineer, Tyros Data Systems - Beirut

08/2014 - 01/2020

- Built the ingestion pipeline handling 2 billion events a day in Java, on Kafka and Cassandra.
- Led the migration from a single PostgreSQL instance to a partitioned, read-replica topology.
- Introduced integration testing with Testcontainers across nine services.

EDUCATION

MSc Computer Science, EPFL Lausanne, 2014

BE Computer and Communications Engineering, American University of Beirut, 2012

SKILLS

Java, Spring Boot, Spring Data JPA, Hibernate, PostgreSQL, Kafka, Cassandra, Kubernetes, ZGC and JVM tuning, JFR, OpenTelemetry, JUnit 5, Testcontainers, Gradle.

SPEAKING

Spoke at a JVM meetup in 2023 on transactional outbox patterns, and at an internal conference on serializable isolation in PostgreSQL.
